

31st Annual Windham County Conservation District Plant Sale!

Saturday, May 8th, 2021

9:00am – 12:00pm

Pickup at Green Mountain Orchards in Putney, VT

Join the WCNRC D for our annual plant sale this year at Green Mountain Orchards! We offer plants for their landscape value, conservation value, revegetation value, and food value, for ourselves, bird species and other wildlife. The best way to maximize your planting success is to match the right plant with the correct soil and light conditions. If you have any questions concerning type of soil, water needs or care for the listed species contact the Conservation District at windhamcountynrcd@gmail.com or by phone at: 802-689-3024. *Please note: due to the Covid-19 situation, email is checked more regularly than phone.*

Notes:

- All nursery stock is bare root unless listed otherwise on the form. Trees and shrub stock are delivered in a dormant state; this prevents transport shock. Plants may appear brown and leafless but once planted will quickly produce green leaves and shoots. Bare root stock plants should be planted immediately.
- If there is a plant species that is not listed and you would like to obtain it, contact us early so every effort can be made to secure that variety for you.
- Herbaceous Perennials die down to ground level each autumn/winter and start to re-grow the following spring. They normally increase in size each year, because they will be re-starting life with a larger root system left over from the previous year. Most perennials are low maintenance. They require little more than basic care which includes fertilizing, mulching and a general overall grooming from time to time.
- Plant supplies are limited, and we will fill orders in the order they arrive. Last year we sold out of our entire inventory prior to pick-up day, so we recommend you order as soon as possible.

Orders will be taken until April 23rd. Pick-up of stock will be from 9:00-12:00 on Saturday, May 8th at Green Mountain Orchards in Putney, VT. The District will not be responsible for stock once it is removed from the pick-up site and reserves the right to refund money for stock that becomes unavailable. No refunds will be made on any orders not picked up by the designated date.

- **Please note on your calendar the date and time of pickup. Saturday, May 8th from 9:00 a.m. – 12:00 p.m.**
- New this year – we are happy to now offer online ordering and payment. Please visit our website at www.windhamcountynrcd.org to place an order and make payment. You are welcome to:
 - a. Place your order online and select “pay with check” and then mail us a check to complete your order. OR
 - b. Place your order online and use a credit card or Paypal account to make payment and complete your order. OR
 - c. Mail in your order form with a check payable to Windham NRC D, just like in past years.
- We recommend you make a copy of your order form for your records. *Orders are not confirmed until we have received payment.*

Conifers

Balsam Fir: (*Abies balsamea*) A longtime favorite Christmas tree due to its distinctive aroma, sturdy branches, symmetrical shape, and excellent needle retention. Nine to ten years in the field are required to produce a 6-7 foot tree. The Balsam has soft flattened blue-green needles up to 1 inch long. It can be used for pulpwood. Moose and whitetail deer browse the foliage, chickadees, nutcrackers, squirrels and porcupines eat the seeds. Grouse use fir forests for cover and obtains food from the needles. *Soil:* moist, well-drained loams; avoid planting in low areas. *Light:* full sun but tolerates shade. *Mature Height:* 40 to 60 feet. *Zones:* 4-6

Norway Spruce: (*Picea Abies*) Norway Spruce is often planted as a Christmas tree, in addition to being used in forestry for timber or paper production, and as an ornamental tree in parks and gardens. Does best in well-drained, sandy soils, and transplants easily. Good winter shelter for wildlife. *Zones 2-7.*

Northern White Cedar: (*Thuja occidentalis*) Also called American Arborvitae, this tree's medium size and flat, scale-like foliage makes it a very popular tree for landscape, hedge and windbreak use. Rot resistant wood is soft, light-colored, durable and aromatic. Its pyramidal growth pattern is easily shaped. Red squirrel and many songbirds consume its seeds. This tree is not typically a Christmas tree. *Soil:* moist and loamy.
Light: full or 1/2-day sun. *Height:* mature height is 70 feet. *Zones:* 3-8

Fraser Fir: (*Abies Fraseri*) Commonly used for ornamental and Christmas tree purposes, the Fraser Fir is a small evergreen coniferous tree. Fraser buds later than Balsam so it is more tolerant of early spring frosts. It also does better in dry conditions than Balsam. It's mild fragrance, strong limbs and ability to retain its soft needles for a long time when cut make it an ideal Christmas tree. Red squirrels like the seeds and buds of Fraser Fir. Prefers moist, well-drained soils and full sun.

Wildlife/Songbird/Revegetation Shrubs and Trees

Buttonbush: (*Platanus occidentalis*) Common *buttonbush* is used for erosion control along waterways. It forms dense stands and its swollen plant base stabilizes the plant. Leaves grow opposite or whorled in threes or fours around stem. Autumn color is dull yellow or green. Requires periodic rejuvenation pruning, relatively pest free. This bush will only grow in the warmer portions of Windham County. The seeds are eaten by the mallard, wood duck, and many others. The nectar is eaten by the hummingbird. *Soil:* Likes swampy areas but will grow on dryer ground. *Height:* 3-12 feet. *Zones:* 5-9.

Dogwood: Red Osier: (*Cornus sericea (stolonifera)*) This shrub is used as a screen, shrub border and for soil stabilization along waterways. The bark turns dark red in autumn. Leaves are oblong with pointed tips and turn dark red in the fall. Flowers are white and bloom in late May to early June. Fruit persists through fall and is a popular food for turkey, ruffed grouse, bobwhite, pheasant, and many other birds. *Soil:* tolerant of dry sites but prefers wet areas along streams and ponds. *Light:* full sun to light shade *Height:* 6' to 10' tall with an equal or greater spread *Zones:* 2-7

Dogwood: Silky: (*Cornus amomum*) Silky Dogwood is a hardy and fast grower. It is popular for erosion control. It has red bark, though not quite as red as 'red osier dogwood'. Leaves are narrow and 3 to 5 inches long and turn purple to red in autumn. Flowers are yellowish/creamy white which bloom in late May to early June. Fruit is generally abundant, and blue or bluish-white, 1/4 to 3/8 inch in diameter. The fruit is eaten by wood ducks, turkey, ruffed grouse, bobwhite, pheasant, woodcock, woodpeckers, and many others *Soil:* prefers moist and moderately acidic soils *Light:* prefers full sun to partial shade. *Height:* 6-8 ft high/ 6-9 ft. spread *Zones* 4-8.

Shadbush Serviceberry (Canadensis): (*Amelanchier canadensis*) Canadian serviceberry is a woody, deciduous shrub native to the US. Shadbush is the common name because its flowering coincides with the annual migrations of shad in New England rivers. Leaves are 1.5-2.5 inches, oblong-elliptic in shape and finely toothed. Autumn colors are deep orange to red. Flowers are white with long petals, and bloom in dense groups. Fruit is dark purple and often used in pies and jellies. The shrub is called the juneberry because the fruit ripens in June. It is used as a medicinal plant and an ornamental plant and is sometimes made into bonsai. The fruit is eaten by ruffed grouse, dove, several varieties of woodpeckers and many more birds. *Soil:* prefers moist soils in swamps and thickets. *Light:* partial to full shade. *Height:* 25 ft. *Zones:* 4-7

Chokeberry: (*Aronia melanocarpa*) Chokeberry is a deciduous, cold hardy shrub useful in landscape plantings, showing white flowers in the spring and colorful red foliage and heavy, dark fruit in the fall. Native to the Northeast, chokeberry is tolerant to drought, soil compaction and salt. Turns rich red and orange in autumn, holds its fruit into winter. Spreads readily by suckering. Edible fruit can be canned and make healthy fruit drinks. The fruit and buds are a favorite food of

ruffed grouse, turkey, bobwhite, pheasant, cedar waxwing and many others. *Light:* Full sun to light shade. *Soil:* Commonly grows in wet areas but can tolerate dry soil. *Height:* 8 feet, 3-4 feet spread. *Zones:* 4-9

Viburnum, Highbush Cranberry: (*Viburnum trilobum*) Highbush Cranberry is an erect native shrub that serves dual purposes as both an ornamental and a food plant. Plants are multi-stemmed but do not form thickets by spreading. The shrub is useful as a medium tall hedge or border for screening or a windbreak. Leaves are dark green in the summer and reddish in the fall. Flowers are white and fruit is bright red or orange and persists throughout the winter. The fruits can be eaten raw or cooked into a sauce to serve with meat or game. Fruit can also be used in jellies, jams, pies, sauces, liqueurs and wine. Hardy plant that will fare well once established, self-fertile. Good wildlife food and cover plant for small mammals and birds. Twigs are eaten by deer, moose and beaver. Fruits are a staple winter food for ruffed grouse and are eaten sparingly by pheasants and at least five species of songbirds. *Soil:* Grows most often in moist areas but can thrive in sunnier, dry areas. *Height:* 6 to 15 feet, 8-10 feet spread. *Zones:* 2-7.

Viburnum, Nannyberry: (*Viburnum lentago*) Nannyberry is a shade-tolerant species useful in landscape plantings as shrub borders, taller barriers, hedges, and windbreaks. It produces good seasonal displays of flowers, fruits, and fall leaf color and the fruit are eaten by many species of birds and wildlife. *Soil:* Favors rich, moist, sites, will tolerate dry sites. *Light:* shade or sun, adaptable to many sites. *Height:* 20 feet, 10-15 feet spread. *Zones:* 3-7

Roselow Sargent Crabapple: (*Malus sargentii Roselow*) Exceptional ornamental. The only true apple shrub. Profuse white flowers, ¼" dark red fruit. It is a densely branched, seed propagated cultivar. Roselow is recommended for use in field and farmstead windbreaks, landscaping and for wildlife food and cover. The fruit is a favorite food of the ruffed grouse, pheasant, and woodpecker. Countless other birds rely upon the fruit, seed, buds, nectar, and flowers for food. It is relatively resistant to most of the typical crabapple disease and insect problems. Resistant to drought, soil compaction and flooding. *Soil:* Sand, loam, moist to dry. *Light:* full sun to partial shade. *Height:* 8 feet. *Zones:* 4-7.

Virginia Creeper: (*Parthenocissus quinquefolia*) Virginia Creeper is a native, fast-growing, perennial, woody vine that may climb or trail along the ground. The leaves are compound, containing five leaflets. Leaflets are red when they first emerge but turn green as they mature and turn bright red to maroon color in the fall. The fruit is a 4 to 6 mm diameter bluish-black berry. Note: fruit is toxic to humans. Do not allow vines to grow on specimen trees; use garden arbors or fences. *Soil:* tolerates a wide range of conditions. *Light:* partial shade to full sun. *Zones:* 3-9.

Fruit Trees

Liberty Apple: A medium-sized, yellow-fleshed dessert apple with 90 percent red over yellow background color. Tree is vigorous, spreading and an annual bearer. Liberty is resistant to apple scab, cedar apple rust, fire blight and mildew. A good choice for the home gardener. *Zones:* 4-7

Honeycrisp Apple: This crisp, juicy, sweet-tart apple has a rich flavor that has made it "#1" in taste panels. The fruit averages 3 inches and up, matures ten days before Red Delicious and stores well. Outstanding winter hardiness gives this variety excellent potential for northern growing regions. Honeycrisp is moderately resistant to apple scab. Tree is late blooming. The fruit is mostly orange red with a yellow background. *Zones:* 3-9

Galarina Apple: This mid-late season Gala-like apple was developed in France. Fruit resembles Gala, small to medium in size, red to orange-red, with some yellow background color. Flavor is crisp and sweet and will store up to four months in regular cold storage. The apple will hang up to four weeks after expected harvest with very little stem cracking. Tree is vigorous, hardier than Gala and the growth habit is upright-spreading. Galarina™ shows high tolerance to apple scab and mildew. *Zones:* 4-8.

Peach: Red Haven: This variety is considered by many as the standard for the Northeast peach industry. Tree is vigorous, very bud-hardy and productive. Fruit is medium-sized and colors to a brilliant red. One of the best commercial varieties. *Zones:* 5-9

Pears – it's best to plant 2 varieties for good cross-pollination

Pear: Seckel: A small pear with rich yellowish-brown skin when fully ripe. One of the best-quality dessert pears. Ideal for the home garden. Tree is vigorous, hardy and productive. Ripens two weeks after Bartlett (early September). *Zones:* 5-8.

Pear: Harrow Sweet: A late-season pear developed by the Harrow Research Station in Ontario, Canada, Harrow Sweet ripens approximately three weeks after Bartlett (mid-September). This variety has shown very good resistance to fire blight. The fruit size and appearance are similar to that of Bartlett; however, Harrow Sweet does develop an attractive blush. *Zones:* 4-8.

Fruits and Vegetables

Asparagus: Millennium: This asparagus plant is high yielding and high-quality. In trials, Millennium has been productive, with high quality spears, tender, and has good flavor. Thought to be best adapted to heavier soils, but results from our grower survey indicate success with a wide range of soil types. *Zones* 3-8

Currants: Pink Champagne: This is the tastiest currant on the market for fresh eating! Pink Champagne current is a vigorous upright bush, free of leaf diseases, with a beautiful translucent pink fruit. Pink Champagne is easy to grow, produces fruit of high quality and good flavor. *Zones* 3-7

Black Currants: Minaj Smyeriou: Black currants tend to be hardy and vigorous. The deep black berries are tart and flavorful. Okay for fresh eating when fully ripe but fantastic lightly sweetened for preserves, sauce or combined with other fruit. They grow to about 4 ft and suffer less pest and foliage issues than other ribes making them a good choice as an edible ornamental. Disease resistant and vigorous. Mild flavor is rated very highly. Rust resistant variety. *Zones:* 3-5.

Hinnomaki Red Gooseberries : Hinnomaki Red is a variety with superb flavor, high yields and a beautiful red color. The outer skin is tangy while the flesh is sweet. The plants grow upright and are mildew resistant. The sweet berries can be eaten fresh or baked in a pie. These very productive plants are adaptable to various growing systems, hedge or ornamental.

Note: Black Currants and Gooseberries are alternate hosts for White Pine Blister Rust. Do not plant near White Pines

Elderberries – cross-pollination is needed. The recommended ratio is 1 Samyl : 5 Samdal

Elderberry: Samdal: This is one of several newer elderberry varieties from Denmark. Plants are vigorous, producing long shoots from soil level one growing season and bearing fruit the next. These are removed after bearing and replaced by the current year's growth. This makes the plant easy to prune and manage as a bush. Large fruit clusters with good flavor ripen in August each year. Berries have very high anthocyanin content....very good for you! This is the more productive variety, but both varieties are required for cross pollination in a ratio of 1 Samyl : 5 Samdal. *Zones* 3-7

Elderberry: Samyl: This variety will provide good cross-pollination when paired with the Samdal variety. Samyl has particularly high-quality flowers. *Zones* 3-7

Boyne Red Raspberry: (Early) Recommended for beginners. Released in 1960, Boyne is an early-season variety that is extremely winter hardy. It consistently produces deep-red, medium-sized berries. The medium-sweet, aromatic flavor makes it great for freezing and jam. It will grow where other varieties experience winter injury to the canes. *Zones* 3-7.

Raspberry: Heritage (Fall Bearing): This heirloom variety was long considered the standard variety for production and high-quality fruit by which fall-bearing varieties were judged. Heritage is a highly popular variety for home gardeners. The fall crop is highly productive and ripens from the end of August through October, depending on your location. The berries have good size, color and flavor. The fruit is good for jam and freezing and is delicious for fresh use, as well. *Zones* 4-8

Bristol Black Raspberry: (Summer bearing Mid-Season) This heirloom quality variety was released from the Cornell Small Fruit Breeding Program in Geneva, New York. This black raspberry plant is a high-producing early variety whose upright growth and cluster formation make its berries very easy to pick. It has medium, firm, glossy fruit with the best black raspberry flavor. Moderately hardy but very vigorous, Bristol shows tolerance to powdery mildew. *Zones 5-8.*

Strawberry: Cavendish (Early mid- season) Cavendish strawberry, which originates in Nova Scotia, is the result of a cross between two varieties known for their winter hardiness and attractive, large fruit. It produces high yields that ripen over a long growing season. Excellent flavor and overall quality of the fruit makes this variety a good choice for commercial and home use. Cavendish is highly resistant to red stele and has some resistance to Verticillium wilt. *Zones 3-7.*

Strawberry: Jewel (Mid-Season): Jewel performs well over a wide range of growing conditions. Jewel is recommended for commercial growers and home gardeners. Jewel has large berries with superb quality and flavor. Jewel is successful for home gardening due to its overall quality and consistent performance. Plants have moderate winter hardiness. Care must be taken at renovation to maintain a good plant stand. *Zones 4-8*

Rhubarb: Cawood Delight: This rhubarb variety has deeper red color and slightly thicker stalks than MacDonald. Cawood Delight has a stout growth habit that will excel in northern areas. It may struggle in areas with long periods of high heat. We have had a lot of positive feedback on this variety from commercial growers and home gardeners. *Zones: 4-7.*

Grape Vines: Vanessa (Red): Hardy to around -20F. Very high quality seedless red grape with thin skin and good eating quality. Strawberry, non-foxy flavor. Can produce good yields on fertile soil in moderated sites.

Grape Vines: Itasca (White): The newest grape from the U of MN breeding program. Itasca has proven itself to be among the hardiest cultivated grapes known, even surpassing Frontenac and Marquette in cold hardiness. Very vigorous growth, slightly more than Frontenac. Very productive. With aromas of apple, pear, and violet and lower acidity, this selection is very well suited to making dry white wines and sparkling wines. Some very nice off dry wines have also been produced. Also good as a fresh eating grape or for juice and jellies.

Blueberries– it's best to plant 2 varieties for good cross-pollination

Duke Blueberries: (Early Season) Duke blueberry is an early-season variety. It is high-yielding and hardy. The attractive fruit is medium to large, light blue, and slightly tart. Berries maintain their uniform quality better than most other varieties. Duke grows upright to a height of 4-6 feet. *Zones: 4-7.*

Northland Blueberries: (Mid-Season) Developed by Michigan State University. Northland has excellent winter hardiness. It produces a consistent crop following winter temperatures as low as -30 degrees. The medium-sized berries are very flavorful-similar to wild blueberries. The plant grows to about 4 feet, with attractive foliage throughout the fall. Grows best in zones 3-7.

Elliott Blueberry: (Late Season) Elliot blueberry plants are very productive and grow vigorously and upright. Elliott is considered the latest of all varieties, fruiting through September. This variety is winter hardy. Berries are medium-sized, firm and have a light-blue color. Fruit needs to be picked fully ripe for best taste. This variety is a good choice for extending the growing season. *Zones 4-7.*

Perennials

Achillea Millefolium Saucy Seduction (Yarrow): up to 48", Good looking, compact, bushy and heat loving, Saucy Seduction is a stunning Yarrow with its masses of long-lasting clusters of rose-pink flowers with tiny white centers. Good for attracting butterflies, blooms for weeks from early to late summer, resistant to heat, drought, deer and rabbit, this perennial is easy to care for. Thrives in full sun. *Zones 3-9.*

Actea Simplex Pink Spike #1 (Bugbane): 48-56", Graceful wands of fragrant bottle brush blooms supported by bushy, colorful, deeply veined foliage. Attracts butterflies, blooms late summer, thrives in shade or sun. *Zones 3-9.*

Dianthus Gratianopolitan "Firewitch": A selection of the Border Pinks, a group of Dianthus that are a favorite for planting in rock gardens or using as a border edging. This outstanding variety forms a low clump of grassy blue-grey foliage, with a long summer display of fragrant single magenta-pink blooms. Shear plants back lightly after blooming to maintain a tight, compact habit. Plants require good drainage and are an excellent choice for hot dry sites or gravelly soils. Attractive to butterflies. Evergreen. Selected as the 2006 PERENNIAL PLANT of the YEAR. Grows 6-8". *Zones 3-9*

Echinacea "Kismet Intense Orange": Height: 12-16", features masses of flat-petaled, vivid orange flowers with a large, central, gold-brown cone. Attractive to butterflies. Excellent for cutting. These coneflowers begin blooming in early summer and continue for months if faded flowers are regularly removed. Although leaving some spent blooms on over the winter months provides food for finches and other birds. Dried seed heads also provide interest to the winter garden. *Zones 4-9.*

Adiantum Pedatum (Maidenhair Fern): Maidenhair fern has a delicate appearance, forming a medium sized mound of arching black-stemmed fronds with light green leaflets arranged in a wide fan. Excellent foliage for using in cut flower arrangements. Plants take a couple of years to reach mature size, appreciating a rich soil that stays evenly moist. Clumps may be divided after 4 to 5 years. Grow 12-23" *Zones 2-9*

Gaillardia Goblin (Kobold): Loose clumps of fuzzy, upright stems topped with daisy-like flowers form a blanket of blooms, attracts butterflies and hummingbirds, especially valuable to bees. Grows 8-12". *Zones 2-9*

Hosta: Blue Mountains #1: 20-32", One of the best blue hostas with intense, attractive blue-gray puckered, heart shaped leaves with large white flowers. Attracts hummingbirds. Partial sun to shade, blooms in the summer. *Zones 3-9.*

Iris Germanica: Babbling Brook: Height: 32-36", Upright spiky clumps support showy blooms. Blooms late spring, full sun, attracts butterflies, deer resistant. Excellent for cut flowers. *Zones 3-9"*.

Monarda Balmy Series "Balmy Purple" Height: 8-10", Beebalm is a traditional favorite for the perennial border, with a striking display of richly-colored flowers through the summer months. This more compact selection features purple flowers, arranged in large, shaggy heads, an ideal size for the middle of a sunny border. Foliage is delightfully fragrant. Good powdery mildew resistance. A favorite of both butterflies and hummingbirds. Blooms mid to late summer, full sun to partial shade. *Zones 4-9.*

Paeonia Lactiflora: Raspberry Sundae: 26-30", Shrubby clumps of green foliage support this large showy fragrant flower. Attracts butterflies and hummingbirds, deer resistant, full sun. *Zone 3-8.*

Rudbeckia Hirta "Cherry Brandy": 20-24", A total breeding breakthrough, this is a remarkable Gloriosa Daisy selection that literally blooms for months on end. It forms a midsized mound, bearing large daisy heads with cherry-red petals surrounding a black eye. Absolutely fantastic in mixed containers or borders. Blooms in the summer, full sun to partial shade, Attracts hummingbirds and butterflies. *Zones 5-8*

Sedum "Autumn Fire": Thicker foliage forms tighter upright habit with bright rose-colored blooms. Blooms mid-summer until Fall, full sun, attracts butterflies. Grows 24-30" *Zones 3-9*

Veronica Longifolia "First Glory": 18-22", A compact Speedwell selection, ideal for near the border edge, in containers and the rock garden. This forms a low mound of attractive deep green foliage, bearing numerous spikes of dark royal blue flowers starting in early summer and continuing for weeks. Easy and colorful. Attractive to butterflies. *Zones 4-8*

Trillium Erectum (Red Trillium): Height: 12-14", Maroon red bloom is held above solid green leaves; berries follow bloom; color variations are normal. Plant in moist, well-drained soil in partial to full shade. Naturalizes well in a woodland setting. *Zones 4-8.*

Trillium Luteum (Yellow Trillium): Height: 12-16", Dainty yellow flower with skirt of three mottled leaves. Plant in moist, well-drained soil in partial to full shade. Naturalizes well in a woodland setting. Excellent plant for the shady edges of ponds, streams, swamps and bogs. Plant with other moisture loving shade plants. *Zones 4-8.*

Rudebeckia hirta: Black-eyed Susan: Black-eyed Susan is a biennial wildflower. It propagates by seed and may perpetuate itself indefinitely. It will do well in full sun or partial shade. Black-eyed Susan is widely used in conservation plantings for erosion control and for the benefits of wildlife. Height: 24-36". *Zones 3-9.*

Doellingeria umbellata: Flat Top White Aster: Flat top white aster is found throughout the eastern US. The plants thrive in sites such as meadows, open woods, thickets, streambanks and wetlands. Height 3-5'. *Zones 3-8.*

Symphotrichum novae-angliae: New England Aster: This perennial forb can be found in moist prairies and meadows, river banks, roadsides and other disturbed areas. The flowers supply valuable late season nectar for migrating Monarch butterflies. Height 3-6'. *Zones 4-8.*

Schizachyrium scoparium: Little Bluestem: A tufted warm-season perennial grass broadly distributed and native to the US and lower Canada. It will grow on a wide variety of soils, but is very well-adapted to well-drained medium to dry infertile soils. It can withstand some shading. Height 2-3'. *Zones 3-9.*

Supplies

Vispore Tree Mats: Stops weeds for 3 years, mats are 3'x3' and block 92% of the sunlight to kill existing weeds and grasses. Over 400 micro funnels cover each square inch of the mat that allows water to trickle through to the soil.

Treeshelters: Treeshelters are a vital component when attempting to establish hardwood trees from seedlings. The twin-walled, solid, translucent tubes provide maximum protection from animal browse, wind, chemical sprays and equipment. In addition, the greenhouse environment created inside the shelter promotes growth.

Plantskydd Soluble Repellent: Animal repellent developed in Sweden and now made in USA from 100% natural ingredients. It is non-toxic and is not harmful to animals or the environment when used as directed. It has been proven effective in extensive field trials against deer, elk, moose, rabbits and opossum.

Plantskydd Granular-Repellent: Best for: rabbits, voles, chipmunks and squirrels. It is rain resistant- no need to apply after every rainfall.

Viterra Agri-gel: Super absorbent formulation which, added to water, forms slurry. Used as a root dip prior to planting, slurry will cling to the roots and act as a reservoir of water for plants. Rate: 1 ounce/gallon of water.

2021 Nursery Stock Order Form

Species	Size	Price/Item	Quantity	Total
Conifers				
Fir, Balsam	18-24"	1 for \$10 or 5 for \$40		
Spruce, Norway	18-24"	1 for \$5 or 5 for \$20		
Cedar, White	2-3'	1 for \$10 or 5 for \$40		
Fir, Fraser	18-24"	1 for \$10 or 5 for \$40		
Wildlife/Songbird Shrubs and Trees				
Buttonbush	2-3'	1 for \$8 or 5 for \$35		
Dogwood, Red Osier	3-4'	1 for \$10 or 5 for \$40		
Dogwood, Silky	3-4'	1 for \$10 or 5 for \$40		
Serviceberry (Canadensis)	1-2'	1 for \$4 or 5 for \$16		
Chokeberry	2-3'	1 for \$5 or 5 for \$20		
Viburnum, Highbush Cranberry	2-3'	1 for \$6 or 5 for \$25		
Viburnum, Nannyberry	2-3'	1 for \$6 or 5 for \$25		
Crabapple, Roselow (Sargent)	2-3'	1 for \$5 or 5 for \$20		
Virginia Creeper	6-12"	1 for \$3 or 5 for \$12		
Fruit Trees				
Apple: Liberty	4-5' (1/2" diameter)	\$25		
Apple: Honeycrisp	4-5' (1/2" diameter)	\$25		
Apple: Galarina	4-5' (1/2" diameter)	\$25		
Peach: Red Haven	5' up (7/8" diameter)	\$25		
Pear: Seckel	4-5' (1/2" diameter)	\$25		
Pear: Harrow Sweet	5-6' (5/8")	\$25		
Fruits and Vegetables				
Asparagus: Millennium	Bare Root	10 pk for \$15		
Blueberry: Duke (Early Season)	Plug	\$12 each		
Blueberry: Northland (mid-season)	Plug	\$12 each		
Blueberry: Elliott (Late Season)	Plug	\$12 each		
Currants: Pink Champagne	Plug	\$15 each		
Black Currants: Minaj Smyeriou	Bare Root	\$15 each		
Red Gooseberry: Hinnonmaki Red	Bare Root	\$15 each		
Elderberry: Samdal	Plug	\$15 each		
Elderberry: Samyl	Plug	\$15 each		
Raspberry: Boyne (early season)	Bare Root	1 for \$5 or 5 for \$20		
Raspberry: Heritage (Fall Bearing)	Bare Root	1 for \$5 or 5 for \$20		
Black Raspberry: Bristol	32 Cell TC Plug	1 for \$6 or 5 for \$22		
Strawberry: Cavendish (Early Mid-Season)	Bare Root	25 pk for \$10		
Stawberry: Jewel (Mid-Season)	Bare Root	25 pk for \$10		
Rhubarb: Cawood Delight	Bare Root	\$12 each		
Grape Vines: Vanessa (Red)	Bare Root	1 for \$10 or 5 for \$40		
Grape Vines: Itasca (White)	Bare Root	1 for \$10 or 5 for \$40		
Spring Perennials				
Achillea Millefolium Saucy Seduction	Plug	5 pk for \$20		
Actea Simplex Pink Spike #1	Bare Root	1 for \$10, 3 for \$20		
Dianthus Gratianopolitan Firewitch	Plug	5 pk for \$20		
Echinacea Kismet Intense Orange	Plug	1 for \$12, 3 for \$30		
Adiantum Pedatum (Maidenhair Fern)	Plug	1 for \$7, 3 for \$18		
Gaillardia Goblin (Kobold)	Plug	5 pk for \$20		
Hosta: Blue Mountains #1	Bare Root	5 pk for \$18		
Iris Germanica: Babbling Brook	Plug	1 for \$7, 3 for \$18		
Monarda Balmy Series Balmy Purple	Plug	5 pk for \$25		
Paeonia Lactiflora: Raspberry Sundae	Bare Root	1 for \$15, 3 for \$40		
Rudbeckia Hirta Cherry Brandy	Plug	5 pk for \$20		
Sedum Autumn Fire	Plug	5 pk for \$18		
Veronica Longifolia First Glory	3" Plug	5 pk for \$25		
Trillium Erectum Red Trillium	Bare Root	5 pk for \$15		
Trillium Luteum Yellow Trillium	Bare Root	5 pk for \$15		
New this year - Perennial Pollinators

Details for 2021 Trout Stocking Program

We are pleased to be able to offer this service again this year.

Information for People New to Stocking Ponds (and good information for the rest of us too)

Is your pond ready for Fish?

Before stocking, check your pond for suitability for trout. Water depth should be at least 8 feet. (This can be measured with a weighted rope.) Your pond's water should be clear (clear enough, for example, to see a white 10" diameter object at a depth of 6 feet or more.) And the bottom temperature in the summer shouldn't exceed 68 degrees F. Rainbows can tolerate warmer water than brook trout.

Which Trout Should I Order?

While both Brook and Rainbow trout are great fish, for first-time stockers, Rainbow trout are recommended. Brook trout are more sensitive and need a cold, clear, deep pond that runs year-round. Rainbow trout are more temperature hardy and can deal with slightly murkier water than Brook trout.

Ordering Fish for Delivery to Your Pond

- You must order a minimum of 50 of the 10-12" fish to qualify for pond deliver.
- Deliveries can be made in Windham County. If you are outside of Windham County, please talk to us to discuss.
- For deliveries, we need a detailed map showing directions to your property and pond. Our suppliers do not live in Windham County and our District Staff are new. We will need route numbers, names of roads and estimated mileage from major intersections. Remember to flag the pond if you have more than one pond on your property. Please include a cell phone number (if possible) on your order form. Trout not delivered cannot be returned to the trout farm facility.

Picking Up Your Fish at the Agway Location

- Pick-up is on **Wednesday, May 19 between 1-1:30pm** at the Brattleboro Agway near Exit 3.
- Trout will be forfeited if they are not picked up during the allotted time frame. Trout once bagged cannot be returned to the fish tank.
- Fish can last up to two hours in the bag, so plan to bring the fish directly to the pond. Don't plan to do any errands after picking up the fish.
- Please make a copy of your order form so you know what you have ordered.
