**Rudbeckia hirta**

Edward F. Gilman, Teresa Howe

**Introduction**

Black-Eyed Susan forms a clumping, 2-foot-tall mound of foliage topped with a bright display of red/orange flowers bordered with yellow (Fig. 1). Distribution of color in the flower varies depending on the cultivar and seed source. Flowering is more profuse when the faded blossoms are regularly removed. The flowers are useful for cutting. Space plants 18 to 24 inches apart in a mass planting to create a carpet of color. Plants can become weeds in the garden because seeds germinate readily in nearby beds. What a wonderful weed to have in the garden.

**General Information**

- **Scientific name:** Rudbeckia hirta
- **Pronunciation:** rudd-BECK-kee-uh HER-tuh
- **Common name(s):** Black-Eyed Susan, Gloriosa Daisy, Coneflower
- **Family:** Compositae
- **Plant type:** annual; perennial; biennial; herbaceous
- **USDA hardiness zones:** 2 through 11 (Fig. 2)
- **Planting month for zone 7:** Jun; Jul
- **Planting month for zone 8:** May; Jun
- **Planting month for zone 9:** Apr; May
- **Planting month for zone 10 and 11:** Mar; Apr; Oct; Nov
- **Origin:** native to North America
- **Uses:** mass planting; border; cut flowers
- **Availability:** generally available in many areas within its hardiness range

**Description**

- **Height:** 2 to 3 feet
- **Spread:** 2 to 3 feet
- **Plant habit:** spreading; round
- **Plant density:** open
- **Growth rate:** moderate
- **Texture:** medium

Figure 2. Shaded area represents potential planting range.

Foliage

Leaf arrangement: alternate
Leaf type: simple
Leaf margin: entire
Leaf shape: ovate
Leaf venation: none, or difficult to see
Leaf type and persistence: deciduous
Leaf blade length: 4 to 8 inches
Leaf color: green
Fall color: not applicable
Fall characteristic: not applicable

Flower

Flower color: orange-red; yellow
Flower characteristic: summer flowering; fall flowering

Fruit

Fruit shape: no fruit
Fruit length: no fruit
Fruit cover: no fruit
Fruit color: not applicable
Fruit characteristic: inconspicuous and not showy

Trunk and Branches

Trunk/bark/branches: not applicable
Current year stem/twig color: green
Current year stem/twig thickness: medium

Culture

Light requirement: plant grows in full sun
Soil tolerances: clay; sand; acidic; loam
Drought tolerance: high
Soil salt tolerances: good
Plant spacing: 12 to 18 inches

Other

Roots: not applicable
Winter interest: not applicable
Outstanding plant: not particularly outstanding
Invasive potential: may self-seed each year
Pest resistance: long-term health usually not affected by pests
Use and Management

The many Rudbeckia species tolerate most well-drained soils if given full sun. Provide excellent drainage for best growth. High salt tolerance makes Rudbeckia well-suited for planting close to the beach.

Various flower color combinations of red, orange and yellow are available in the five or more available cultivars. Rudbeckia hirta ‘Indian Summer’ is a sturdy selection with large, yellow flowers that develop 10 to 14 weeks after seeds are sown. Unlike many other Black-Eyed Susans, this one does not require staking. It is also relatively free of disease and insect problems.

Rudbeckia seed may be planted directly into the garden. The seed germinates in 5 to 10 days at temperatures between 70 to 75-degrees F. Seed started indoors germinates more quickly. Barely cover the seed. The plants wilt for one or two days after transplanting. Propagate perennial types by division. Rudbeckia is generally propagated in the garden by division or cuttings in the spring or fall season.

Aphids suck sap from the plants and coat the leaves with sticky honeydew.

Goldenglow sawfly may completely defoliate plants. The larvae are gray with dark stripes.

Four-lined plant bug causes round, brown, sunken spots on the leaves. The injury is often mistaken for a disease.

Pests and Diseases

Downy mildew causes seedlings to wilt and die. On older plants the foliage is mottled light yellow.

Several leaf spots may be found but are not serious. Remove and destroy infected leaves.

Powdery mildew may cause a white powdery growth on the leaves in late summer.

White smut causes light spots on the leaves. Destroy plant residues in the fall and get rid of infected plants as they are noticed.

Verticillium wilt may kill Rudbeckia spp.
